

Tips for Homework (Module 7)

1. The appendix starts on page 140, directly after the Flash Card List.
2. (Homework problem 6e) A hypnotic dosage for this medicine is between 100 and 200 milligrams.
3. Whenever they ask how much you would administer, remember they are talking about only **one** dose.
4. (Homework problem 8) You should round to at least three decimal places for intermediate answers. It is **best** not to round at all until you get to the final answer.
5. (Homework problem 10) I used the mnemonic device I shared with you for module 5. You could just as easily use the unit (or dimensional) analysis.
6. (Homework problem 11) Convert each of the three servings to milliliters, then add to find the sum.
7. (Homework problem 12) An acute angle is an angle that is less than 90 degrees. An obtuse angle is more than 90 but less than 180 degrees. A reflex angle is more than 180 but less than 360 degrees. This comes from module 2.
8. Keep in mind how you are expected to round dosages. We always round **down** when it comes to dosages so people do not get overmedicated.
