

Tips for Homework (Module 8)

1. Remember to round dosages down to avoid overmedication. But you should round BSA to the nearest hundredth place.
2. Remember to use the correct formula for BSA based on if they give you the measurements in pounds and inches or kilograms and centimeters. The formulas are very similar. Also, be sure to convert heights given in feet and inches to inches.
3. A drug can be prescribed based on weight or BSA. Look for the order saying 15mg/**kg** or 15 mg/**m²** to determine which you've got.
